This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021795-030220161111. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 825 results (100.00%) out of the 825 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and ten composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/10/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021796. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 880 results (100.00%) out of the 880 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and 11 composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/09/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
H1	Test Hold Time
H2	Prep Hold Time
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			All samples analyzed outside of holding time. Continuing Calibration Verifications (CCVs): All percent differences were within laboratory acceptance criteria except for PCB018, PCB028, PCB052, PCB169, PCB189, and PCB206 in various CCV batches. QC Batch 151014L02, the LCS/LCSD % recoveries for PCB206 were above the control limit.

Stage 2 Review: Calibration - CCV?		•		CCV Batch 151027A084 (GS/MS EEE), 10/27/2015 (18:16): A high CCV percent difference (%D) for PCB206 (43%). Since the associated results included only QC samples, qualification of the data is not warranted. CCV Batch 151029A089 (GS/MS EEE), 10/30/2015 (12:13): A high CCV %D for PCB206 (38%). The associated results are qualified as estimated (UJ/J). CCV Batch 151031A015 (GS/MS EEE), 10/31/2015 (10:54): A high CCV %D for PCB206 (31%). The associated result is qualified as estimated (UJ/J). The percent differences for all other analytes in the CCVs met project criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021797. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 605 results (100.00%) out of the 605 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and six composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/11/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 151006S05: A project sample from another SDG was used for the MS/MSD analysis. Consequently, an assessment of matrix affects cannot be made for this batch. The LCS was performed in duplicate to provide accuracy and precision for this batch. QC Batch 151012S05, Client Sample ID OA3401201321-23: For 4,4'-DDE and 4,4'-DDMU, the sample concentrations are greater than four times the spike concentrations so precision and accuracy could not be evaluated for these analytes. Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all batches in this SDG. See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021798. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Lab Replicate RPD
LCS Recovery
MS Recovery

Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 825 results (100.00%) out of the 825 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and 11 composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/11/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Analytical Method	Comment
A2540B	Percent Solids less than 50% for the following Client Sample ID: OA3201201313-15 (49.5%). All associated results are qualified as estimated J/UJ.
BNASIM	Percent Solids less than 50% for the following Client Sample ID: OA3201201313-15 (49.5%). All associated results are qualified as estimated J/UJ.
PCBSIM	Percent Solids less than 50% for the following Client Sample ID: OA3201201313-15 (49.5%). All associated results are qualified as estimated J/UJ.
SW9060	Percent Solids less than 50% for the following Client Sample ID: OA3201201313-15 (49.5%). All associated results are qualified as estimated J/UJ.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
S1	Sample less than 50% solids
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021799. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 550 results (100.00%) out of the 550 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and five composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/11/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 150924S01, Client Sample ID OA3301201309-11: High MSD %R = 140% for 4,4'-DDD and high MS/MSD %R = 201% / 225% for 4,4'-DDE. Associated detected results are qualified as estimated with a potential high bias (J+). Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all batches in this SDG. See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries. QC Batch 150924S03: A sample from another SDG was used for the MS/MSD. Consequently, an assessment of matrix affects cannot be made for this batch. The LCS was performed in duplicate to provide accuracy and precision for this batch.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021800. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 715 results (100.00%) out of the 715 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and eight composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/09/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

The project samples in SDG 15-02-1800 are the primary samples for Location ID OA12. Project samples from SDG 15-02-1801 were submitted as the field duplicate samples for this analysis. Field duplicate samples were not submitted for Client Sample IDs OA1201201337-39 and OA1201201340.5 from this SDG. Discrepancies outside of project criteria between the reported results in these duplicate pairs are qualified as estimated (J/UJ). See the Field Duplicate Report for specific qualifications.

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch F1003TOCS1, Client Sample ID OA1201201309-11: MS/MSD recoveries and RPD met project criteria. QC Batch F1005TOCS1, Client Sample ID OA1201201313-15: High MS/MSD % recoveries of 129% / 144%. Associated detected results are qualified as estimated with a potential high bias (J+). See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			QC Batches F1003TOCL1 and F1005TOCL1: LCS samples only analyzed in these batches.

Review Questions

Method: SW9060

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Quantitation - Dilution Factor?			•	No dilutions.
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			
Stage 2 Review: Field Duplicates - RPD within limits?	•			Acceptable precision was demonstrated by the results reported for the field duplicate pairs submitted and analyzed for this method.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021801. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Field Duplicate
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 715 results (100.00%) out of the 715 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include six individual samples and seven composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/09/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

The project samples in SDG 15-02-1801 are the field duplicate samples for Location ID OA12. Project samples from SDG 15-02-1800 were submitted as the primary samples for this analysis. Primary samples were not submitted for Client Sample IDs OA1202201337 and OA1202201338.5 from this SDG. Discrepancies outside of project criteria between the reported results in these duplicate pairs are qualified as estimated (J/UJ). See the Field Duplicate Report for specific qualifications.

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: COC - Receipt anomalies?	•			See SDG comments.
Stage 2 Review: COC - Sample/Methods checked?	•			
Stage 2 Review: Case Narrative - Anomalies?	•			All samples analyzed outside of holding time. A project sample from another SDG was used for the Laboratory Replicate in QC Batch F0928TSD8.
Stage 2 Review: Samples - Collection date?	•			12/09/2013
Stage 2 Review: Samples - Extraction date?			•	
Stage 2 Review: Samples - Analysis date?	•			09/28/2015
Stage 2 Review: Samples - Holding time?		•		The holding time exceeded project criteria of 180 days. The associated results are estimated with a potential low bias (J-).
Stage 2 Review: Samples - Batching?	•			F0928TSB8 / F0928TSD8
Stage 2 Review: Samples - Lab qualifiers?		•

Stage 2 Review: Calibration - Oven Temp End?	•			
Stage 2 Review: Calibration - Balance Calibration Check?	•			
Stage 2 Review: Blank - Method blank?	•			ND
Stage 2 Review: Precision/Accuracy - Lab Replicate?	•			QC Batch F0928TSD8: The Laboratory Replicate was performed on another project sample. Consequently, an assessment of precision cannot be made for this sample set.
Stage 2 Review: Quantitation - PQLs?	•			
Stage 2 Review: Quantitation - Results (i.e. correct analytes)?	•			
Stage 2 Review: Field Duplicates - RPD within limits?	•			Acceptable precision was demonstrated by the results reported for the field duplicate pairs submitted and analyzed for this method.

Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 151006S04, Client Sample ID OA1202201325-27: High MS/MSD % recoveries for PCB180 (126% / 130%). Associated detected results are qualified as estimated with a potential high bias (J+). Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all samples in this SDG. See QC Outlier Report for %R corrected for wet weight reporting of spike recovery.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021802. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery

Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 825 results (100.00%) out of the 825 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and ten composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/09/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021803. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 605 results (100.00%) out of the 605 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and six composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/09/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
C11	Continuing Calibration Verification percent recovery, percent difference, or percent drift
H1	Test Hold Time
H2	Prep Hold Time
L	Percent recovery of laboratory control sample recovery was outside established limits
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 151014S01: A sample from another SDG was used for the MS/MSD analysis. Consequently, an assessment of matrix affects cannot be made for this batch. The LCS was performed in duplicate to provide accuracy and precision for this batch. QC Batch 151006S03, Client Sample ID OA1701201317-19: For 2,4'-DDE, 4,4'-DDE, and 4,4'-DDMU, the sample concentrations are greater than four times the spike concentrations so precision and accuracy could not be evaluated for these analytes. High MS/MSD % recoveries for following analytes. Associated detected results are qualified as estimated with a potential high bias (J+). 2,4'-DDD: 145% / 128% 2,4'-DDT: 138% / 133% 4,4'-DDD: 199% / 160% 4,4'-DDNU: 184% / 148% 4,4'-DDT: 216% / 170% Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all batches in this SDG. See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021804. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

Ambient Blank
Calibration Blank
Calibration Blank - Negative
Continuing Calibration Verification

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 715 results (100.00%) out of the 715 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and eight composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/09/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Reason Code Definitions

Code	Definition
H1	Test Hold Time
H2	Prep Hold Time
M	Matrix spike recovery was outside established criteria.
S	Surrogate recovery out of criteria (upper or lower limit)
TR	Trace Level Detect

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021805. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery

Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 1100 results (100.00%) out of the 1100 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include five individual samples and 15 composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/10/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch 150922S03, Client Sample ID OA3001201341-43: For 2,4'-DDE, 4,4'-DDD, 4,4'-DDE, 4,4'-DDMU, 4,4'-DDNU, AND 4,4'-DDT, the sample concentrations are greater than four times the spike concentrations so precision and accuracy could not be evaluated for these analytes. High MSD %R = 174% for 2,4'-DDT. Associated detected results are qualified as estimated with a potential high bias (J+). Low MS %R = 37% for 2,4'-DDD. Associated results are qualified as estimated with a potential low bias/estimated reporting limit (J-/UJ). See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries. High MS/MSD RPD = 31% for 2,4'-DDT. The associated results are qualified as estimated (J/UJ).

Review Questions

Method: SW9060

Review Questions	Yes	No	NA	Comment
Stage 2 Review: Precision/Accuracy - MS/MSD?		•		QC Batch F1005TOCS2: A project sample from another SDG was used for the MS/MSD. QC Batch F1006TOCS1, Client Sample ID OA3001201309-11: High MS %R = 131%. Associated detected results are qualified as estimated with a potential high bias (J+). A high MS/MSD RPD = 23%. Associated detected results are qualified as estimated (J). See QC Outlier Report for %R corrected for wet weight reporting of spike recoveries. Since all of the samples in this SDG represent a single sediment core, the MS/MSD sample is representative of all batches in this SDG.
Stage 2 Review: Precision/Accuracy - LCS/LCSD?	•			For QC Batches F1005TOCS2 and F1006TOCS1, only an LCS was analyzed. The LCS was performed in duplicate to provide accuracy and precision for these batches.

This report assesses the analytical data quality associated with the analyses listed on the preceding cover page. This assessment has been made through a combination of automated data review (ADR) and supplemental manual review, the details of which are described below. The approach taken in the review of this data set is consistent with the requirements contained in the Sampling and Analysis Plan for Sediment Sampling Program 2013 Program – Part 1 QAPP for Remedial Action at Palos Verdes Shelf (OU5 of the Montrose Chemical Corporation Superfund Site), Los Angeles, California to the extent possible. Where definitive guidance is not provided, data has been evaluated in a conservative manner using professional judgment. In cases where two qualifiers are listed as an action, such as 'J/UJ', the first qualifier applies to positive results, and the second to non-detect results.

Samples were collected by Innovative Technical Solutions, Inc., Walnut Creek, CA; analyses were performed by CALSCIENCE ENVIRONMENTAL LABS, INC., GARDEN GROVE, CA and were reported under sample delivery group (SDG) 15021807. Results have been evaluated electronically using electronic data deliverables (EDDs) provided by the laboratory. The laboratory data summary forms (hard copy) have been reviewed during this effort and compared to the automated review output. Findings based on the automated data submission and manual data verification processes are detailed in the ADR narrative.

The following quality control elements were supported by the electronic deliverable and were evaluated during this review effort:

Blank
Blank - Negative
Lab Replicate RPD
LCS Recovery
MS Recovery
MS RPD
Prep Hold Time
Surrogate
Test Hold Time

The following quality control elements were either not applicable to the deliverable, or were not supported by the electronic deliverable, and were therefore not included in the automated data review. Those elements required for the project were reviewed manually, as narrated in the Comment section below.

A representative sampling or ten percent of sample and QC results were manually evaluated for compliance with project specific requirements and consistency with hard copy results. The following summaries were generated during the evaluation of this data set and are included in this report as applicable.

Batch – The analytical batch report is reviewed for completeness and compliance with project specific requirements. Incomplete or non-compliant run sequences are identified and their impact on data quality are discussed in the narrative.

QC Outlier – Results exceeding the evaluation criteria are reviewed for compliance with project requirements and a minimum of ten percent of the non-compliant QC values reported electronically are verified for consistency with hard-copy values.

Qualified Results – Qualified results are evaluated for compliance with project requirements and ten percent of qualified results are verified for consistency with the QC Outliers.

Rejected Results – All rejected results are evaluated for compliance with project requirements. The reason for rejection of the data is verified against hard copy data.

Field Duplicates – Field duplicate comparison results are evaluated for compliance with project requirements and ten percent of values reported are verified for consistency with the hard-copy data.

Data Submission Warnings – Warnings encountered during the data submission process are evaluated and their affect on data quality is discussed in the narrative below.

Analytical deficiencies, project non-compliance issues and inconsistencies with hard copy results observed during ADR evaluation process and their impact on data quality are summarized in the narrative below.

A total of 330 results (100.00%) out of the 330 results (sample and field QC samples) reported are qualified based on review and 0 results (0.00%) have been rejected. Trace values are not counted as qualified results in the above count. The qualified results are detailed in the following tables and discussed in the narrative below, where appropriate.

Narrative Comments

Project samples listed on COC include four individual samples and two composite samples of two samples each. The laboratory lists all of the individual samples with unique Lab Sample IDs as well as the composite samples. The time sampled for the composite samples are listed on the COC but not listed on the Case Narrative. Samples received in good condition per case narrative.

The holding time for all test methods exceeded project criteria of one year if stored frozen at -18°C after collection. The sediment samples were collected on 12/09/2013 and preserved in deep freeze until extraction and analysis. All samples qualified as estimated with a potential low bias (J-/UJ) for holding time exceedances.

Flag Code and Definitions

Flag	Definition
J	Estimated: The analyte was positively identified, the quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification".
NJ	The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
R	The data are rejected due to deficiencies in meeting QC criteria and may not be used for decision making.
U	Undetected: The analyte was analyzed for, but not detected.
UJ	The analyte was not detected; however, the result is estimated due to discrepancies in meeting certain analyte-specific quality control criteria.
